

Experimental Avionics

ADVANCEDPANEL, AF-6600,
and AF-5000 Series

The
DYNON
Group

Started in 1999, Advanced Flight Systems is a classic family entrepreneurial story. An electrical engineer with software expertise, founder/owner Rob Hickman created an engine monitor for the RV-4 he was building. Other local builders expressed interest, and a company was born. After almost two decades of innovation, Advanced Flight Systems is now part of the Dynon family of companies. For his contributions to the industry through Advanced Flight Systems, Rob Hickman was inducted into the EAA Homebuilders Hall of Fame in 2017.

Today, Advanced Flight Systems is the premier, concierge-class provider of avionics solutions for your experimental aircraft. We're the only panel-crafter that makes almost everything ourselves, including the avionics, software, panel, harnesses, and even the power and wiring distribution system. When you choose Advanced, you benefit from over 20 years of innovations that propelled us from our beginnings as a family business to the trusted company we are today. Let our expert pilots, advisors, and support staff help you every step of the way as we design and build an *ADVANCEDPANEL* that is worthy of your aircraft.

At Advanced, We Go Beyond

ADVANCED CONTROL MODULE

At the heart of every ADVANCEDPANEL system is the groundbreaking Advanced Control Module, which is now also available for retail purchase. It's the first and only comprehensive smart power and distribution center for your aircraft's electrical system, avionics, headsets, aircraft lights, autopilot servos, trim servos, flap motor, control sticks, and panel switches. All of these connect to the ACM with customized harnesses we provide, enabling a "plug and play" installation while saving you hundreds of hours of wiring, crimping, troubleshooting and frustration. The ACM provides no-mistake wiring, easy diagnostics, and the best possible future-proofing for upgrades down the road.

The ACM-ECB (Electronic Circuit Breaker) offers EFIS-based monitoring and control of your aircraft's electrical system.

The Advanced Control Module (ACM) is a groundbreaking avionics control center that revolutionizes aircraft electrical system management. It seamlessly integrates and automates a wide range of common aircraft avionics, wiring, and electrical peripherals to save time, simplify installation, and enhance safety.

Safety-Enhancing Electronic Circuit Protection

Each aircraft system is protected by a dedicated electronic circuit breaker (ECB) in the ACM that is customized in software to meet device load and circuit requirements. The SkyView or AFS avionics system continuously monitors the entire electrical system for faults, and allows pilots to view comprehensive information about all circuits and systems. The ACM also allows traditional high current-carrying panel switches and wires to be replaced by safer, low-voltage panel-mounted switches that are available with internal lighting.

Centralized Power and Data Distribution

The ACM serves as the central power distribution hub for the aircraft's electrical system, consolidating power for avionics, headsets, aircraft lights, autopilot servos, trim servos, flap motors, control sticks, and low voltage panel switches. The ACM works with a comprehensive line of pre-made, aircraft and product-specific ACM harnesses that connect all aircraft avionics and ancillary systems, simplifying wiring and installation.

Simplify Installation and Save Time

ACM-specific harnesses connect everything together in a plug and play fashion, dramatically reducing the time it takes to bring a panel to life. This plug and play design also simplifies aircraft wiring and troubleshooting. The ACM's modular design also facilitates future upgrades as your aircraft mission changes.

Enhanced Avionics Functionality

The ACM goes beyond electrical distribution and protection, offering a host of advanced avionics features that would otherwise require separate components. These include:

- 27 dedicated channels of solid-state electronic circuit protection with circuit-level current monitoring and control. Circuits can be physically switched or electronically controlled from Dynon/AFS displays.
- Built-in SV-ARINC-429 module
- Multi-step flap positioning system
- Airspeed-controlled wig-wag lighting
- Panel switch backlight dimmer
- Multi-Axis Trim Interface (requires SV-AP-PANEL)
- Expanded SV Network Hub (4 ports + AP servos)
- Low voltage panel switch interface with support for in-switch lighting
- Control stick interface
- Alternator over-voltage protection, with single or dual alternator support

NOW AVAILABLE TO ALL HOMEBUILDERS

Start with the ACM Jumpstart Kit, available at the new **ADVANCEDPANEL.store** webstore. The rest of your avionics can also be purchased at **ADVANCEDPANEL.store**. Or, consult with our *ADVANCEDPANEL* experts for additional guidance as you complete your configuration.

This diagram illustrates the layout of the AF-6600 control panel. Key components include:

- AF-6600 Display:** A large central rectangular display area.
- D30 Display:** A smaller rectangular display located to the left of the main display.
- Control Buttons:** A row of six buttons at the bottom, labeled from left to right: "STAND BY", "ALT", "STAND BY ALT", "STAND BY", "REF", and "FMS".
- Emergency Stop:** A large circular button with a red border and a stop symbol, located to the right of the main button row.
- Power Switches:** Two toggle switches labeled "LEFT" and "RIGHT", each with "ON" and "OFF" positions, located to the left of the D30 display.
- EMAG POWER:** A label indicating the emergency magnetic power system.
- AF-6600 Label:** The text "AF-6600" is printed below the main display area.
- Annotations:**
 - "No Tail Number" points to the top right corner of the panel.
 - "Cut & Label for Left & Right Left CB Toggle ONLY to be installed." points to the left and right toggle switches.

Your Panel, Evolved

As an aircraft homebuilder, are you worried about wiring today's increasingly complex systems? The *ADVANCEDPANEL* process lets you entrust this important aspect of your aircraft to the people that know aircraft systems best. You can focus on your perfect panel design while we handle the heavy lifting. We take the entire process of building your avionics, electrical system, and other aircraft systems and simplify them into a unique guided process. It starts with our expert, bespoke design services and ends with a drop-in integrated system that cuts hundreds of hours off your project.

While you spend your time completing your aircraft's construction and worrying about your paint scheme, Advanced takes the panel design we collaborate on together and brings it to life. You receive a ready-to-install *ADVANCEDPANEL COMPLETE*, complete with pre-configured, pre-wired avionics already installed.

All *ADVANCEDPANEL COMPLETE* systems are built around and feature the Advanced Control Module - the groundbreaking avionics control center that revolutionizes aircraft electrical system management. It seamlessly integrates and automates a wide range of common aircraft avionics, wiring, and electrical peripherals to save time, simplify installation, and enhance safety.

After you use the simple included instructions to mate your *ADVANCEDPANEL COMPLETE* to your aircraft, you're done. Want to fly sooner? Give AFS a call.

ADVANCEDPANEL™

ACM Jumpstart Kit ADVANCEDPANEL™

Time Saved: ⌚⌚⌚

Install Speed: >>>

The most affordable way to install the ACM. Begin with the ACM Jumpstart Kit - available from both Dynon and Advanced. It contains the ACM and the core set of harnesses needed in every aircraft. Then, use the *ADVANCEDPANEL* Store (advancedpanel.store) to finish your system with ACM-specific harnesses and remaining components.

WHO IT'S FOR

The budget-conscious builder that still wants the features and benefits of the ACM, but is comfortable selecting, installing, and configuring their avionics system.

ADVANCEDPANEL PRODUCT GUIDE

Traditional Dynon harnesses for most components

Comprehensive harnesses available from manufacturer

Modules connect with convenient SkyView Network Cables

Advanced Control Module (ACM) with Electronic Circuit Breakers

ACM harnesses connect all avionics components

Airframe harnesses between ACM and aircraft electrical accessories*

SV-ARINC-429 module included in ACM

Expanded SV Network Hub (4 ports + AP servos) in ACM

Pre-wired panel switches with low-voltage ACM Interface

Complete avionics system designed by our experts

System fully bench-tested with your actual equipment and harnesses, including 3rd party IFR Navigators

Custom designed, CNC manufactured instrument panel

Fully finished *ADVANCEDPANEL COMPLETE*: Dynon/AFS avionics mounted and configured in panel, ready to install in aircraft

* Currently available for RV-7, RV-8, RV-9, RV-10, and RV-14 airframes.

ADVANCEDPANEL™ BYOPanel

Time Saved: ⌚⌚⌚⌚

Install Speed: >>>>

BYOPanel = "Build Your Own Panel". We work with you to configure your complete avionics package, including configured displays, modules, and customized harnesses. They arrive ready to plug and play into the included ACM and mount in your panel.

WHO IT'S FOR

The builder who wants all the advantages of an ADVANCEDPANEL - plug and play installation, tailored harnesses, and complete system pre-configuration - but prefers to design and cut their own panel. They like crafting metal but want as much help as possible configuring avionics and speeding their install.

The ADVANCEDPANEL process

The three routes to an ADVANCEDPANEL

The process described here is typical of the customer journey when you choose ADVANCEDPANEL COMPLETE. But now, you can benefit from our expert avionics design services and incorporate the Advanced Control Module (ACM) into your aircraft - while building your own panel - by choosing the ADVANCEDPANEL BYOPanel (Bring Your Own Panel) path. Or, you can order the Advanced Control Module by itself and build your own system around it by purchasing the ACM Jumpstart Kit. Each of these options are detailed in the pages in this catalog.

Consider your aircraft's mission

Are you equipping for VFR or IFR? If you want to plan a panel with a future upgrade in mind - we can do that. This can mean a VFR panel with a cutout for a future IFR navigator, or maybe a panel with a single EFIS and the plan to add a second screen. We can build your ADVANCEDPANEL with this in mind.

Think about whether you prefer Advanced AF-5000/6000 or Dynon SkyView HDX displays

Both systems are from our Dynon family of products and use the same "behind-the-scenes" components. If you're not sure which system to go with, we can help you decide.

Work with our experts to customize and design your panel

If you need some inspiration, browse our site and catalog for examples of ADVANCEDPANEL installations in your aircraft type. We have built many ADVANCEDPANELs for RV-7, RV-8, RV-9, RV-10, RV-14, Glasair, CubCrafters, Kitfox, RANS, Zenith, Sonex aircraft, and many more. Give us a call to start your ADVANCEDPANEL adventure: we'd love to talk with you one-on-one. We'll send you a quote listing all the parts (with detailed pricing) that will be included in your ADVANCEDPANEL.

Sit back and relax while we engineer, craft, and configure your panel

Once you have approved the design, your panel is CNC machined, powder coated, labeled, and fully assembled. While we're working on the panel, we are also building your harnesses and assembling, testing and configuring your panel components. We send you the peripheral components that get installed throughout the aircraft so you can make progress before your ADVANCEDPANEL arrives. We're sure you have other things to finish on your airplane. So, let us save you hundreds of hours in wiring, configuration, and frustration.

Install your ADVANCEDPANEL

Your ADVANCEDPANEL will arrive carefully packaged and ready to install in your aircraft. Included will be a detailed packing list, schematics, and configuration details. Our ADVANCEDPANEL manual has step-by-step instructions for installing the components, connecting your aircraft systems (lights, boost pump, flaps, etc) and testing the system. Connect to power, pitot static, autopilot servos, and any other systems in your aircraft and you're ready to...

Go Fly... and send us some pictures!

VFR VAN'S AIRCRAFT RV-7/9
With SkyView HDX
From \$33,200

VFR ADVANCEDPANEL COMPLETE Include:

- Touchscreen PFD
- Touchscreen MFD
- ADAHRS
- COM Radio
- WAAS GPS
- Mode-S Transponder
- ADS-B Traffic and Weather
- 2020-Compliant ADS-B Out
- Two-Place Stereo Intercom
- Audible and on-screen AOA
- Full engine & systems monitoring
- Advanced Control Module with electronic circuit breakers
- Switches and audio jacks
- Powder coated and custom-labeled instrument panel
- Wi-Fi Module to enable iPad connectivity

IFR VAN'S AIRCRAFT RV-10
With AF-6600
From \$57,200

IFR ADVANCEDPANEL COMPLETE Include:

- Touchscreen PFD
- Touchscreen MFD
- ADAHRS
- COM Radio
- Redundant WAAS GPS position sources
- Mode-S Transponder
- 2020-Compliant ADS-B Out
- ADS-B Traffic and Weather
- Advanced Control Module with Electronic Circuit Breakers
- Audible and on-screen AOA
- Full engine & systems monitoring
- Switches and audio Jacks
- Powder coated and custom-labeled instrument panel
- Wi-Fi Module to enable iPad connectivity
- Avidyne IFD Series GPS Navigator - Touchscreen FMS/GPS/NAV/COM
- Independent Backup EFIS
- Many full-featured audio panels supported

ADVANCED FEATURES

Weight & Balance: Instantly calculate your CG and load with our Weight and Balance page.

Map + Air Data Page: A unique layout that shows everything you need for VFR flight on one screen.

Airport/Airspace Information: Complete airport information; including - runways, frequencies, METAR's, TAF's and pattern altitudes.

Airspace Information: Selectable airspace information; highlight current boundaries and display the vertical limits, easily select and display overlapping complicated airspaces, reducing pilot workload.

Approach Plates, VFR Sectionals & IFR Charts: Geo-Referenced Approach Plates, Sectionals and IFR Low and High Charts display your aircraft's current location, as well as traffic. Updated every 28 days, display in full-screen or split-screen mode.

EMERGENCY Glide: Calculates and displays airports that are within your aircraft's engine-out glide range.

GPS and ILS Display: CDI and VDI displayed from external GPS navigator or Nav radio.

Aircraft Maintenance Logs: Keeps track and alerts you when it's time for Oil Changes, Annual Inspections, ELT Batteries, Filters, Brakes or any other user configurable item.

Flight Planning: Use the intuitive built-in capability for VFR flights, including vertical flight planning. Load multi-leg flight plans from external GPS navigators when flying IFR.

ADVANCED DISPLAYS

AF series displays are the star of your Advanced Flight Systems panel. The new AF-6600 flagship features a number of upgrades while maintaining compatibility with the popular AF-5000 line. Mix and match them in your panel. All Advanced EFIS models feature high resolution, touchscreen LCD displays, five RS-232 serial ports, two USB ports, ethernet, and Advanced-SV Network connections for comprehensive compatibility with Advanced, Dynon SkyView components, and many third-party devices.

10.4" AF-6600 DISPLAY

Weight: 4 lb. (1.8 kg)

Power : 3A @12V DC

Dimensions: 8.15"H x 10.25"W

• Improved Performance

- ° New processor enables 60 Hz screen updates for amazingly smooth visuals.
- ° New LCD screen features increased brightness and more vivid colors.
- ° Start-up time decreased to under 20 seconds.

• AF-5000 Series Compatible

- ° Wiring and mounting is exactly the same as AF-5600 displays for easy upgrades.
- ° AF-6600 and AF-5000 series displays are fully cross-compatible and can be mixed in a panel.

• Sharp Design

- ° Updated, flush-mounted 10.4" touchscreen that you'll be proud to showcase in your panel.

• Improved Pilot Interface

- ° Dual-Concentric encoder knob affords a more intuitive user interface.
- ° Ambient light sensor allows display backlight to automatically adjust to cockpit lighting conditions.

• Lighter and More Compact

- ° Low profile rear cover reduces panel depth requirements
- ° Approximately 1 pound lighter than previous AF displays.

12.1" AF-5800 DISPLAYS

The 4:3 aspect ratio touchscreen display gives you a wide and tall picture that affords exceptional situational awareness. Additional buttons and knobs along the right side of the display dynamically reconfigure to the task at hand, freeing you up from hunting for features deep in menus. Connect multiple screens together and you can display any combination of EFIS, Engine Monitor, and Map across your screens.

12.1" AF-5800 Display

Weight: 5.4 lb. (2.45 kg)

Power : 3A @12V DC

Dimensions: 9"H x 11.5"W

12.1" AF-5700 DISPLAY

The AF-5700 touchscreen display - featuring an updated ADVANCED Touch interface. The display combines the largest-in-class 12.1" screen with a minimized installation footprint, affording pilots the opportunity to install a large screen EFIS in an instrument panel that previously could not support one.

Weight: 5.1 lb. (2.31 kg)

Power : 3A @12V DC

Dimensions: 8.90"H x 10.85"W

NOTES:

- Must be installed with AF-6600, AF-5500, AF-5600, or AF-5800 display.

COMPONENTS

VHF COM Radio

A revolutionary COM radio interface will change the way you fly with dedicated buttons for tuning Tower/CTAF, ATIS/WX, ATC, and Ground frequencies.

SV-COM-760: 25 kHz spacing. | SV-COM-T8: 8.33 kHz spacing, TSO'd transceiver.

Weight: SV-COM-PANEL: 0.38 lb. (0.17 kg), SV-COM-760: 0.56 lb. (0.25 kg),
SV-COM-T8: 0.77 lb. (0.35 kg)

Power: 0.2A Receive, 2.0A Transmit @12V DC for SV-COM-T8

Autopilot Control Panel

Individual buttons for all autopilot modes let you use your EFIS display menus exclusively for other features like navigation and flight planning. Built-in 2-axis speed-sensitive trim controller.

Weight: 0.3 lb. (0.15 kg) | Power: 0.05A @12V DC

Knob Control Panel

Dedicated controls for your barometric altimeter setting and the two bugs you use the most.

SV-KNOB-PANEL: Available in horizontal and vertical versions.

Weight: 0.4 lb. (0.18 kg) | Power: 0.07A @12V DC

Two-Place Stereo Intercom

Stereo, two-place intercom with audio connectivity for EFIS alerts and music that is usually only found in full-size audio panels.

SV-INTERCOM-2S: Includes horizontal and vertical faceplates, stereo headset jacks.

Weight: 0.45 lb. (.204 kg) | Power : 0.1A @12V DC

6-Place Remote Audio Panel with Bluetooth

The SV-AUDIO-6BTR is a fully remote-mounted 6-place audio panel, controlled directly via your avionics display. Centralize your aircraft radio communications, intercoms, and Bluetooth audio connections while saving valuable panel space.

Weight: 1.34 lb. (0.61 kg)

Power: 11 to 33V DC

NEW ARRIVAL

ADAHRS - Primary and Secondary

Provides primary flight instruments, including attitude, airspeed, altitude, magnetic heading, HSI, VSI, AOA, G-meter, turn rate, slip/skid ball, OAT, and TAS. Add a secondary ADARS for redundancy: SkyView and AFS EFIS systems will automatically cross-check your instruments for you. For aircraft where the desired ADARS placement would result in interference due to proximity to ferrous metal or power, an optional remote magnetometer is available.

SV-ADARS-200: Primary, SV-ADARS-201: Secondary / Backup

SV-MAG-236: Remote magnetometer (optional)

Weight: 0.5 lb. (0.2 kg) for SV-ADARS-200/201, 0.46 lb. (0.21 kg) for SV-MAG-236

Power: 0.15A @12V DC

Engine Monitoring Modules

The EMS module receives signals from engine sensors for display on your EFIS. Order the SV-EMS-220 for most engines, SV-EMS-221 for Rotax iS and select other canbus-enabled engines.. Engine sensor/harness packages for Lycoming/Continental/Jabiru/Rotax engines sold separately. Sensors/harnesses available à la carte for other engines. Two modules can be used to monitor dual engines or to provide up to 28 EGT&CHT inputs for large engines. Probe + Harness packages available.

SV-EMS-220: For Lycoming, Continental and other traditional aircraft engines

SV-EMS-221: For Rotax iS series and ECU-equipped ULPower engines

Weight: 0.63 lb. (0.29 kg) | Power: 0.11A @12V DC

Autopilot Servos

Just add servos to your system to add a fully IFR-capable autopilot. Mounting kits are available for various aircraft. The optional SV-AP-PANEL adds dedicated autopilot controls. It also features a digital, dual-axis trim controller with proportional speed control and autopilot auto-trim. Various Servo Mounting Bracket Kits: Mounting kits are available for popular aircraft models.

SV32/42/52 Autopilot Servos available in Standard Output Arm, Long Output Arm or Capstan, cable-controls.

Weight: 2 lb. (0.9 kg) for SV32, 3 lb. (1.4 kg) for SV42, 4 lb. (1.8 kg) for SV52

Power: 1.3A / 2A / 2.8A @12V DC (at 100% torque)

AOA / Pitot Probes

The rest of GA is starting to see the value of AOA as a major safety-enhancing device. Meanwhile, it's been available for Dynon EFIS systems for over a decade. It provides progressive audible approach-to-stall alert.

100141-000: AOA/Pitot Probe, Unheated (Underwing)

100667-000: AOA/Pitot Probe, Heated w/controller (Underwing)

100532-000: AOA/Pitot Probe, Unheated (Boom Mount)

Weight: 100141-000: 0.35 lb. (0.18 kg), 100667-000 with controller: 0.72 lb. (0.33 kg)

Power: 10A @12V DC (at Maximum Heat)

COMPONENTS

Mode-S Transponder with ADS-B Out

Lightweight TSO'd, Class 1, Mode-S Transponder with TIS traffic reception (US only) and 1090ES ADS-B Out. When paired with the Dynon SV-GPS-2020 or other suitable position source, the SV-XPNDR-263 is a Class 1, FAA rule-compliant ADS-B Out solution.

Weight: 0.66 lb. (0.30 kg) | Power: 0.4A @12V DC

Traffic/Weather

The dual band SV-ADSB-472 receives ADS-B traffic via 978 MHz (UAT) and 1090 MHz, and also receives NEXRAD, METARS, TAFS, and other weather information. Unlike portable ADS-B receivers, you get FULL ADS-B and radar traffic when you pair this with our SV-XPNDR-261 and SV-GPS-2020.

Weight: 0.3 lb. (0.12 kg) | Power: 0.05A @12V DC

GPS Receiver Module

WAAS-enabled, high-sensitivity GPS receiver/antenna. Provides multiple updates per second for superior mapping and synthetic vision. This module is weatherproof for external mounting.

SV-GPS-2020: US ADS-B Out 2020 compliant when paired with a Dynon transponder.
SV-GPS-250: Not recommended for use in US when equipping for 2020 ADS-B Out

Weight: 0.44 lb. (0.2 kg) for SV-GPS-250, 0.47 lb. (0.21 kg) for SV-GPS-2020
Power: 0.1A @12V DC

ARINC 429

Use this interface module for third-party certified IFR navigators like the Avidyne IFD440/540.

Weight: 0.4 lb. (0.18 kg) | Power: 0.1A @12V DC

Wi-Fi Adapter

Connect your system to your mobile devices via the Wi-Fi Adapter, and use apps to flight plan from home and transfer once you're at the aircraft. Compatible with ForeFlight Mobile, FlyQ, PocketFMS EasyVFR, Airmate, SkyDemon, Ozrunways, and FltPlan Go. One is required for each SkyView display installed in an aircraft, maintaining system redundancy.

Weight: 0.006 lb. (0.003 kg) | Power: 0.1A @12V DC

Harnesses/Network Cables

Prefabricated cables interconnect SV Network components to make sure your installation goes as smoothly as possible. These connect displays, ADAHRS, EMS, ARINC, COM radio, and Knob & AP control panels. Displays also have their own color-coded harnesses available, as do EMS sensor kits.

SV-NET-XXX: Available in lengths of 6" to 30'
SV-ETHERNET-3CC: For multiple displays

Video Input Adapter

Display video from any s-video or composite source. Compatible with AF-5000/6000 series only. Not compatible with earlier AFS EFIS systems.

Weight: 0.14 lb. (0.065 kg)
Power: 0.15A @12V DC

5-Port Network Hub

Join up to 5 SV Network Cables together, eliminating complicated splicing, with this Network Hub.

Weight: 3.2 oz (0.2 lbs)

Backup Batteries

An AF-BAT-3AH is designed to backup a single AF-5000 series screen. The AF-BAT-6AH will backup two screens. They each provide an hour of backup power for their supported configuration.

AF-BAT-3AH: 3 Amp Hour (AF-5000/6000 series only)
AF-BAT-6AH: 6 Amp Hour (AF-5000/6000 series only)

Weight: 0.8 lb. (0.4 kg) - SV-BAT-320
Power: 1.0A @12V DC (while charging)

Builder Support Products

Advanced and Dynon now manufacture a range of Builder Support Products and accessories to help pilots get from "first dream to first flight" as quickly as possible. Examples include Autopilot Level/Disconnect/Yaw Damper/Ident Panel Buttons, FastTrack Mounting Kits for stacking ADAHRS/EMS/ARINC modules, AOA/Pitot/Static Installation Kit, Panel Module Faceplate Blank, Transponder and ADS-B Antennas, and harnesses for Intercom, Transponder, and ADS-B.
