

Stand-Alone Engine Monitor

Simple | Powerful | Dedicated

SkyView HDX's Engine Monitor will be available as a stand-alone offering for E-AB/LSA aircraft with Dynon's next software update, expected right after AirVenture.. When installed in this configuration, pilots benefit from a simplified, engine-focused user interface for streamlined operation.

This new configuration is also the most inexpensive way to get a SkyView HDX display, for a partial panel upgrade that is fully expandable to the a complete SkyView HDX system. Pricing starts at \$4,909 for a 7" display equipped for Rotax iS engines, and \$5,771 for Lycoming/Continental 4 Cylinder engines.

This SkyView HDX configuration is only available for experimental (E-AB/LSA) aircraft at this time.
